

I. DESCRIPTION OF THE PLANNING UNIT

This chapter describes the geographic area of the plan and how the planning council members reached agreement on the composition of the management areas within the planning unit.

A. Description & Determination of the Planning Unit

In this section is a discussion of the Area Development District and its service boundary (which comprises the planning unit for the water management plan).

The service boundary of the LTADD Water Management Planning Council is consistent with the LTADD boundaries. The LTADD service area includes Breckinridge, Grayson, Hardin, LaRue, Marion, Meade, Nelson and Washington Counties.

B. Water Management Areas

The discussion below relates how the council formed its water management areas and how it arrived at its decisions and provides a map showing the water management area boundaries.

The LTADD Water Management Planning Council adopted the LTADD geographical boundary as its service area. Additional areas were also incorporated into the planning area based on the service areas of the water providers in the LTADD district. The Bluegrass ADD incorporated a portion of Washington County, Lake Cumberland ADD incorporated a portion of LaRue County, Barren River ADD incorporated a portion of Grayson County and Green River ADD incorporated a small portion of Grayson County into their planning area based on the service area of one of the water providers in their district (see map).

C. Current Water Service Areas

The areas within the planning unit that have current water service

and water suppliers and distributors serving them are shown on the map accessible via the link below.

E. Future Water Service Areas

The areas within the planning unit that do not currently have water service and are not expected to be served within the planning period and water suppliers and distributors that are projected as most likely to serve these areas are shown on the map accessible via the link below.

Washington County has several projects to complete the proposed project consisting of construction of a raw water line from Willisburg Lake to the Springfield Treatment Plant and a potable water line through Mackville back to Willisburg. Other plans consist of constructing a raw water line to Fredricksburg from an appropriate point on the Bardstown system. Also, there are plans to extend water lines from existing systems into unserved portions of the county.
